KÄRCHER X TTS.

Anyone who should clean hygienically and at the same time wants to work efficiently relies on a combination of machines and manual equipment. So that Kärcher customers do not have to compromise on high quality and ergonomics in any step, the market leader is starting a cooperative venture with the innovative company TTS. The Kärcher X TTS product range includes more than 300 products for manual cleaning.

Achieve more together.

KÄRCHER

KÄRCHER X TTS: 2 strong brands, countless possibilities

Despite all the benefits that using Kärcher machines and detergents offers, there are still tasks that can only be completed by hand. In order to also complete these tasks hygienically and efficiently, cleaning trolleys, buckets, mops and waste containers from TTS Cleaning are therefore now part of the Kärcher portfolio.

They have proven themselves time and again in building cleaning, hotel cleaning, as well as in practically all other areas of application. The innovative, ergonomic and sustainable cleaning tools from the Italian company are available wherever Kärcher items are also on sale.

USER-FRIENDLY INNOVATIONS

Working with TTS cleaning tools highlights the fact that the product developers thought of every step and every movement and optimised many processes. In the self-image of TTS, each of the products must meet the following requirements:

- Support a high hygiene standard
- Save time and costs
- Easy handling
- Be user-friendly, modular and customizable

ERGONOMIC WORK

Building cleaning is often a race against the clock. Areas and furniture must be cleaned in the shortest time possible. In order to make this task as comfortable and fatigue-free as possible for cleaning staff, the cleaning tools from TTS Cleaning meet high ergonomic standards and integrate clever ideas to give users a head start.

CLEANING EQUIPMENT FROM A SINGLE SOURCE

Cleaning companies now get the required complete product range from a single source no matter what task they face. Customers and users can obtain information about all Kärcher X TTS products and purchase them both via the Kärcher distribution channels and from the branches of TTS Cleaning.

GREEN IS BETTER.

TTS has always been committed to the **eco-sustainability** of its production and the **safeguard of natural resources**, always following many eco-sustainability criteria: using environmental company and product labels recognised at European level; promoting material recycling; designing systems that **minimise environmental impact**; favouring **clean energy** sources; and much more!

Many of such actions are in line with the European Directives (GPP - Green Public Procurement), which outline the approach used by Public Administrations in incorporating environmental requirements in all the stages of the procurement process, promoting **environmental technologies** and the develop of more environmentally acceptable products.

Products with PSV-certified components

Cloths, flat mops and mops certified EU Ecolabel

Systems designed to save water

Repairable products

Textile production powered by solar energy

ZERO PLASTIC GOAL

98.8% of the products sold travel inside cardboard packaging, an ecological material as it is made of natural fibres and easily recyclable at the end of life. 91% of the cardboard used contains 80% to 100% recycled paper.

OPTIMIZED TRANSPORT

The products are designed to take up as little space as possible: stackable frames, foldable bag holders and compactable handles are just some of the solutions developed by TTS which, in addition to ensuring maximum efficiency in terms of space saving, allow to optimize packaging and therefore transport, reducing the environmental impact.

THE ORIGIN OF MATERIALS

The plastic used to make the products comes exclusively from selected suppliers that are located at a maximum distance of 45 km from TTS headquarters: the proximity to manufacturers and printers makes it possible to guarantee the origin of the materials and reduce CO₂ emissions linked to transport.

CLEAN ENERGY

Choosing its own growth policies, TTS has always privileged choices of sustainable technological innovation and environmental responsibility of production processes. In this perspective, since 2011 it has installed three photovoltaic systems on the roofs of its headquarters: with a total power of 310 kWp, it is able to produce up to 400.000 kWh/year. The clean energy obtained from the plant is able to completely feed the company.

CARBON FOOTPRINT

The climate change we are witnessing is an urgent and potentially irreversible threat that requires, today more than ever, to be a priority: to combat global warming by reducing greenhouse gas emissions.

The commitment of TTS on this front has resulted in the development of a system for the quantification of greenhouse gas emissions for each phase of the product life according to ISO 14067: in this way, it is possible to identify the most critical phases, implementing concrete actions aimed at reducing CO₂e.

TTS commitment has allowed us to reach an important goal: TTS is one of the first companies in the world to have obtained the implemented Carbon Footprint Systematic Approach certification.

RECYCLED PLASTIC

Environmental responsibility has always influenced TTS's choices, also with regard to raw materials: the result is a wide range of products with components made of recycled plastic, certified Second Life Plastic (PSV) by the Institute for the Promotion of Recycling Plastics (IPPR). Unlike simple self-declarations, PSV certification applies the international ISO 14021 regulation for calculating recycled content, ensuring the quality of recycled plastics and their traceability according to EN 15343. In addition, it involves periodic surveillance by the Certification Authority to ensure compliance over time with the requirements for the maintenance of the mark.

PLASTIC SECOND LIFE

Products certified with the PSV - "Plastic Second Life" brand are made with recycled plastic raw materials and certified by the IPPR, the Institute for the Promotion of Recycling Plastics.

INNOVATION IN CLEANING.

Working with TTS cleaning tools highlights the fact that the product developers thought of every step and every movement and optimised many processes. In the self-image of TTS, each of the products must meet the following requirements:

- Support a high hygiene standard
- Save time and costs
- Easy handling
- Be user-friendly, modular and customizable

Infinitely
ergonomic

FACILITATES CLEANING, REDUCING EFFORT

Ergonomic system with twisting grips and frame with joint.

Continuous assumption of incongruous postures and execution of repetitive movements that require effort can lead to a deterioration of the operator's health over time.

Ray Infinity makes the professional “∞” movement smooth and easy, greatly reducing effort: the turning handgrips and the ergonomic joint help **maintain a correct posture and reduce wrist movements by 75%** compared to traditional systems, preventing the onset of musculoskeletal disorders.*

* "Evaluation of compliance with the ergonomic requirements of the Infinity handle" by Humana Consulting

BUTTON

A SOLUTION FOR EVERY TASK, IN EVERY SECTOR.

CLEANING

Cleaning is the purposeful activity of removing soil and undesired substances from an environment or surface to reduce damage or harm to human health or valuable materials. Cleaning is the process of locating, identifying, containing, removing, and properly disposing of unwanted substances from an environment or material. Standard cleaning is not intended to – and therefore does not – kill or inactivate microorganisms. But by removing them, cleaning lowers their numbers and the risk of spreading infection.

SANITATION

Sanitation is a process to reduce the volume of contaminants such as bacteria and viruses on a surface to levels deemed safe in accordance with public health requirements. Sanitation is sometimes also referred to as “routine disinfection” – but please note the difference between sanitation and disinfection. Compared to disinfection and sterilisation, sanitation does not achieve a defined or complete reduction of germs.

DISINFECTION

Disinfection, also called “targeted disinfection”, is a method for killing or deactivating infectious fungi, bacteria and viruses (but not bacterial spores) on hard surfaces so that the disinfected surface or object no longer poses a risk of infection. Important: disinfection without prior cleaning of the surface is not effective! Also: time is of the essence here – disinfectants need contact time to work properly.

THE CREW'S FRESH HELPERS.

Make our manual cleaning accessories your specialist for every cleaning task. With the high-quality Kärcher accessories, you can remove all dusty, sticky, oily, hot or liquid dirt – reliably, economically and sustainably clean.

The right equipment for the economical and effective wet cleaning of floors – particularly in areas that are difficult to access with machines.

Discover the full range and more information, scan the QR code.

DUST CONTROL.

Effortless dusting: our equipment helps with dust removal and achieves effective dust binding on all types of surfaces and objects. This means that no dust particle remains on the surface.

Surface
Lampo rounded web brush
Rounded web brush with Lampo hooking system for telescopic handles and poles.
Order nr. 5.999-027.0

Floor
Mary Broom
Polypropylene bristles broom for outdoor use without handle.
Order nr. 9.212-039.0

Floor
PVC Broom with bumpers
Broom for indoor use with polypropylene board, PVC soft bristles and thread.
Order nr. 9.212-102.0

Floor
Dustpan and brush set universal
Universal brush set comprising broom and dustpan. Colour: Blue.

EASY ATTACHING TOOLS.

Connecting handles and poles to the tools is a waste of time and effort, requiring complicated procedures that affect the efficiency of the cleaning service. Lampo is the first immediate, fixing and releasing system, without hand contact with contaminated surfaces. Imagine you could use a single handle for all ordinary and extraordinary operations. Attaching equipment in a flash allowing you to deal with any need, expected or unforeseen.

ATTACHING TOOLS QUICKLY

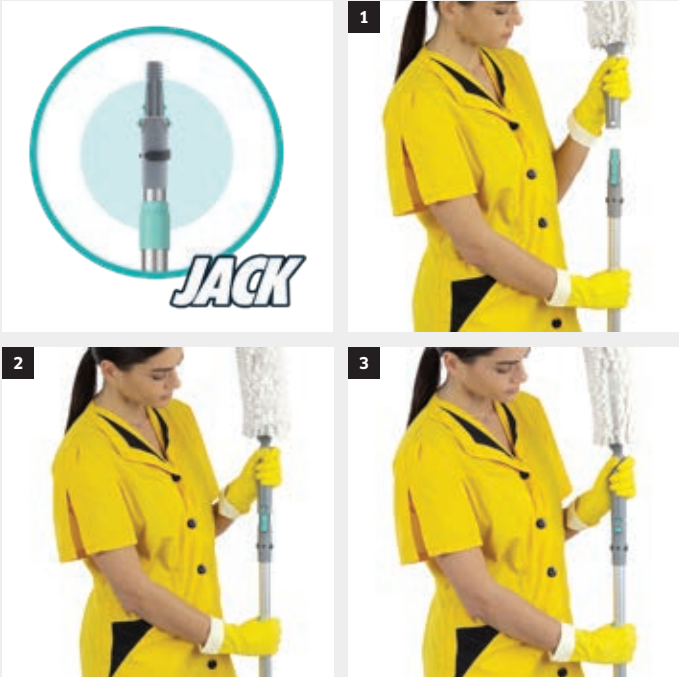

The Jack cone lets you **deal with any need, whether foreseen or unforeseen**: the operator does not have to go back to the storeroom to get the tool required for extraordinary operations, nor even get ladders or stools to reach higher surfaces, as **he always has everything he needs** for any cleaning operation, planned or unplanned.

Jack allows you to quickly switch to high cleaning: the operator can **attach the same handle used with the dusting and washing frames to dusters and web brushes**.

Practical and intuitive, it doubles the possibilities of use thanks to its **handle** and **pole** versions.

THE ADVANTAGES OF JACK

- **Makes cleaning quicker and easier**, eliminating time wasted
- **It keeps the tool fixed during use**, preventing accidental release
- **Ensures maximum flexibility** when using the equipment

Discover the full range and more information, scan the QR code.

HANGS FRAMES WITHOUT CONTACT

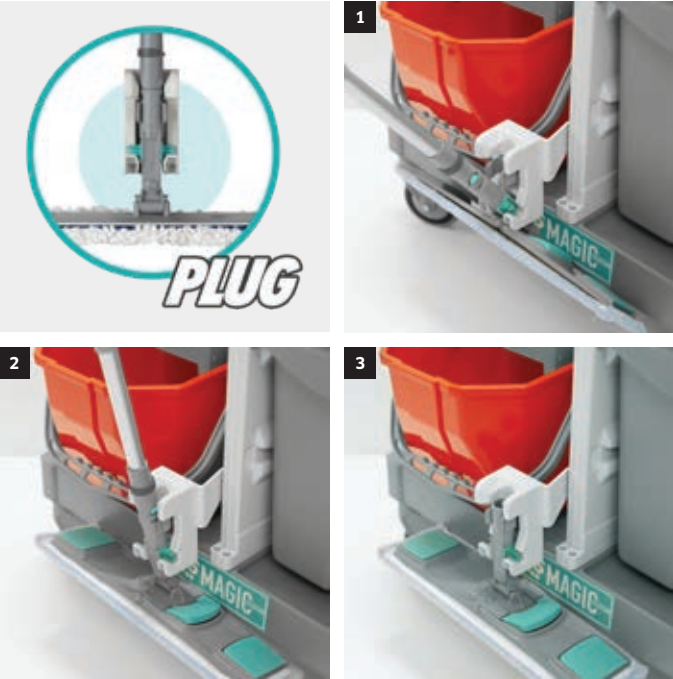

Thanks to the Plug device, the extraordinary becomes ordinary: the operator **can place the dusting and washing frames on the trolley** and switch to cleaning high surfaces with manual tools, avoiding direct hand contact with contaminated surfaces.

In addition, he does not have to constantly space out his tools to empty the bins in the bag holder, open the drawers, pull out the tray and access the baskets: the Plug allows **all the frames to be placed in their place while reducing the number of handles**, thus ensuring a trolley free of obstacles that slow down the various activities.

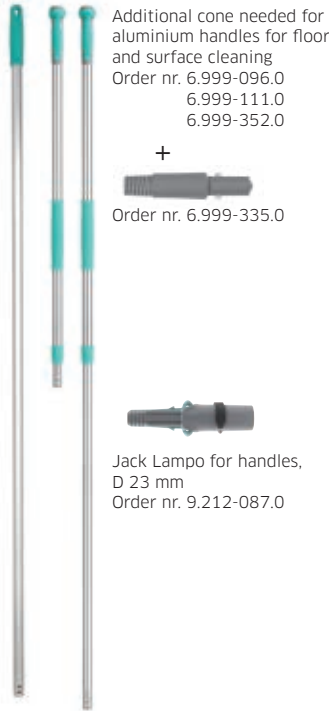

Applied to **Magic** trolleys, it allows you to have all frames available and ready for use without obscuring the operating areas of the trolley. If you also choose **Nickita trolleys with integrated Plug**, you benefit from compact workstations that can be equipped as required with floor dusting and washing systems and manual cleaning tools.

PLUG ADVANTAGES

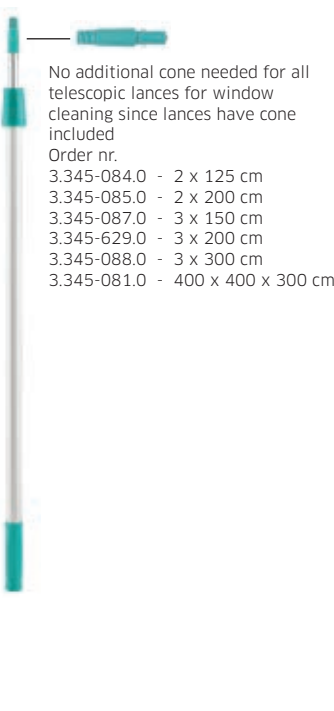

- **Eliminates contact with dirt**, ensuring maximum hygiene
- **Eliminate the number of handles** hindering operation of the trolley
- **Allows maximum equipping** of even the most compact trolley

Attachment WITH additional cone

Attachment WITHOUT additional cone

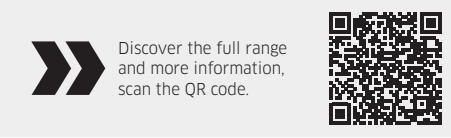

+ Suitable Manual Tools

MEET OUR LIMOUSINES.

Our service trolleys meet the specific needs of the hotel industry, perfectly combining aesthetics and functionality.

The solutions offered facilitate the cleaning and the rearrangement of the rooms, integrating harmoniously into the environment in which they operate. The modularity that characterizes the entire range allows you to configure the trolley based on actual needs, thus ensuring maximum efficiency: a custom-made trolley allows you to perform the various operations more quickly, thus reducing their cost.

Nickita Tec
The compact cleaners trolley with great features. Nickita is a double trolley with wringer conceived to ensure minimum volume and maximum flexibility, with particular attention to design.

Nick Star
Multipurpose trolley with jaw wringer, storage compartments and bag holder for waste collection. Ideal for cleaning medium-large areas where it is necessary to rinse the mop.

Trolley Hotel Classic III
A fold-away, 120-litre bin liner holder is included in the basic equipment of the Trolley Hotel Classic III for 10 to 12 rooms. Hotel cart with three wooden shelves and four large wheels.

Trolley Hotel Premium II
Large 125 mm wheels with bumpers enable easy manoeuvring of the Trolley Hotel Premium II with bin liner holder, even with a heavy load. Hotel cart for 10 to 12 rooms.

H-Cube Climb
Service trolley with axial wheels, equipped with movable tray, multipurpose pockets, hook and strap tape band to attach tools and movable dividers

FLEXOMATE TROLLEYS.

FlexoMate gets the best out of your team and makes existing workflows extra ergonomic and efficient.

Anything but out of control. Our modular cleaning trolley is always safely at your staff's side. It is easy to manoeuvre and can be individually adjusted to different body sizes. Thanks to the smart modular system, our FlexoMate can be easily set up and removed – your crew is ready for any cleaning task. It's good to know that FlexoMate creates healthier working conditions at the same time.

FlexoMate Swift

The FlexoMate Swift is the simplest and most compact version of the FlexoMate. This cleaning trolley is perfect for areas with difficult spatial conditions.

FlexoMate Expert

Space for everything: manual and mechanical cleaning machines are safely stored in the FlexoMate Expert and are easily accessible thanks to the smart design.

FlexoMate ExpertPro

Play it safe: with its lockable doors, the spacious ExpertPro trolley not only offers plenty of security, but also elegantly hides the biggest mess.

Discover the full range and more information, scan the QR code.

WE ARE INNOVATIVE.

Unique product features help to reduce strain on arms and shoulders up to 10% of cleaning staff and thus lowering costs (labor cost of BSCs >75% of total cost).

No time for compromise. The FlexoMate helps you to finish all your cleaning tasks more quickly. Reduce the physical strain on your staff members and meet all your customers' needs, no matter how varied, with just one cleaning trolley.

The clock is ticking – every movement counts. Start your journey into the future of manual cleaning now.

Upgrade your crew!

With the **new FlexoMate** from Kärcher.

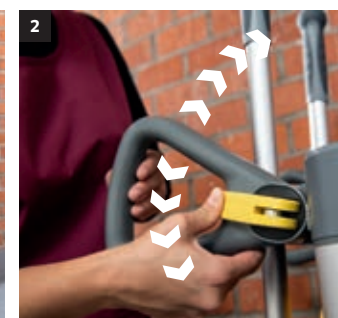

1. Space for cleaning machines

- Use on board and safe transport.
- 15% time savings: less walking in storage rooms as everything is stored on the cleaning trolley.

2. Better ergonomics thanks to FlexoGrip

- Adjustable to any height.
- The healthy push position of the trolley and the adaptation to natural body posture help to reduce the strain on arms and shoulders.

3. Expand with FlexoDock

- Connection of one or more trolleys to each other.
- Uncoupling the trolleys allows access even to areas with limited space. Trolleys docked together are easy to push.

4. FlexoLink creates solutions

- Intelligent tool mounting
- Robust, space-saving and intuitive attachment of wiping mops, dusters and warning signs.

5. Fully compact

- Space-saving in limited storage areas
- Outer modules can either be folded or easily removed.

6. Easily accessible from all sides

- Changeable drawer position (left/right or back/front).
- Quick access to the drawers from any angle – reduces time required by eliminating the need to walk around the trolley.

7. FlexoBox and bevelled shelves

- Attachment of wiping mop to the holder at a 30° angle.
- The position of the mop attachment corresponds to the position of the box and thus improves working conditions during cleaning.

8. Full modularity

- Complete conversion of the trolley through accessories.
- Change of property or a floor cleaning system can be integrated at any time.

9. Individual adaptation

- Doors and side panels offer plenty of space for branding.
- Promote brand awareness and a positive image.

POWERFUL. SAFE. ENVIRONMENTALLY FRIENDLY.

THE PERFECT ADD-ON

Clean takeaways: in addition to manual cleaning machines and equipment, FlexoMate can also transport a mechanical cleaning machine safely and conveniently. Our Kärcher battery-powered cleaning machines are suitable for complete flexibility. They eliminate tangled cables, the search for sockets and a limited radius of movement.

T 7/1 Classic
With fleece filter bag as standard, suitable as entry-level model with good price-performance ratio and strong suction power.

T 7/1 ecoefficiency
Saves 40% energy and is equipped with reinforced main filter basket for vacuuming without filter bag and detachable 7 m cable.

T 12/1
Versatile, robust, quiet, manoeuvrable and tilt-resistant dry vacuum cleaner with excellent suction power.

EB 30/1
Quiet electric broom – perfect for discreet and quick intermediate cleaning. Extra long battery life and exchangeable battery.

BR 30/1 C Bp Pack
Hygienic battery-powered scrubber dryer with microfibre roller technology for floor cleaning on small surfaces.

BR 30/4 C Bp Pack
Cleaning like by hand, only much better: battery-powered scrubber dryer for cleaning hard surfaces up to 200 m².

CV 30/2 Bp Pack
The upright brush-type vacuum cleaner impresses with its triple filter system, tool-free brush replacement and time-saving power cable quick-change system.

Puzzi 8/1 C
The spray extraction machine is the specialist for upholstery cleaning or for fibre-deep cleaning of carpet surfaces.

BVL 5/1
Ultra-light and extremely robust thanks to innovative EPP material: The powerful and long-lasting cordless backpack vacuum BVL 5/1 Bp from Kärcher for cleaning tasks in the narrowest of spaces.

T 9/1 Bp
Extremely powerful, flexible and durable battery vacuum cleaner that stands up to every comparison with mains-operated dry vacuum cleaners.

HV 1/1 Bp Pack
Lightweight and versatile battery hand vacuum cleaner with accessory kit consisting of upholstery nozzle, floor nozzle and crevice nozzle.

WVP 10
Battery-powered window and surface vacuum cleaner – ideal for all smooth surfaces such as windows or tiles.

GOOD FOR US, GOOD FOR THE PLANET!

The wide Magic range includes EU Ecolabel-certified trolleys, synonymous with sustainability, safety and quality.

Choosing them means contributing to the protection of the environment and health: they are sustainable throughout their entire life cycle, from being made from at least 30% recycled plastic to being designed to be easily disassembled for repair or recycling at the end of their life. They are also safe as they are produced without the use of heavy metals harmful to humans and dangerous to ecosystems. Finally, they guarantee high quality and long-lasting service life: they have passed the tests for strength, stability, durability and operator safety conducted by an independent body according to EN 16121 and EN 14073.

SUSTAINABILITY MAKES THE DIFFERENCE.

At Kärcher, sustainability is an aspiration and driving force.

This is why we not only impress with our powerful cleaning systems but also take responsibility: for the environment, our products, the supply chain, society and our staff.

ZERO EMISSIONS

Setting the course for climate protection

As a leading, climate-friendly company in our industry, our production facilities have been CO₂-neutral since 2021. In addition, we use green electricity and offset emissions by funding climate protection projects. Many plants use photovoltaic systems to produce power for their own consumption. We are making business travel CO₂-neutral through digital conferences and electric vehicles.

REDUCE, REUSE, RECYCLE

Focus on conserving resources

We design our cleaning systems to be as environmentally friendly as possible, from manufacture and use right through to disposal. The aim is to reduce primary raw material use by procuring materials from sustainable sources, increasing the proportion of recycled plastic in products and manufacturing long-lasting machines. We are also working on sustainable packaging and preventing plastic waste.

SOCIAL HERO

Responsibility is our compass

In our supply chain, we also value environmentally friendly behaviour, long-term relationships, strict social standards and transparency. We follow clear criteria against which we measure ourselves and our partners. We take social responsibility seriously and therefore fund organisations and individuals who advocate for nature, culture and society.

You can find more information
about the topic of sustainability
in the company at [karcher.com](https://www.karcher.com)
