

WM System LTD - A world of solutions

WM System is an LTD, based in Reggio Emilia, Italy, which began manufacturing loading ramps for commercial vehicles in 1991.

The founder of the company, produced the first loading ramps with the purpose of loading big machines on light commercial vehicles. The first model, called PC, was made in one size only. Shortly the company realized that, in order to meet the most varied customer's needs, custom-made ramps (adapted for size and loading capacity) were to be produced.

Thanks to the flexibility of our products and our experienced technicians, WM System LTD is now able to offer a complete range of loading ramps for commercial vehicles, making the commercial vehicle as practical as possible.

The use of WM ramps reduces time in loading and unloading materials, decreasing consequently costs and efforts. WM ramps allow one single operator on his own and safely, to complete any loading operations for any load on wheels.

In fact, WM System's philosophy has always focused on the improvement of working conditions and the subsequent optimization of costs.

WM System loading ramps have been TÜV NORD certified since 1996.

All WM System loading ramps are completely made in Italy, with materials from Italian supply chain.

WM System ensures that each production process meets the highest standards, this makes WM SYSTEM leader in the specific niche of market.
