

Now we are launching the only computer-controlled system for cleaning trolleys.

A unique new feature that saves time, reduces costs and helps the environment!

Patent pending

Activa Method Control,
art.nr. 29120

**Available in
two versions!**

Activa Method Control Mini,
art.nr. 29121

Activa Method Control is a cleaning trolley combined with a new invention that gives you the opportunity to impregnate the cleaning mops while you are cleaning. Use the control panel to choose the exact amount of liquid that you need for each mop and the spray system inside the mop box moistens the cleaning mop with ready to use cleaning chemicals.

The cleaning mop is moistened evenly and the impregnation of mops can be individually adjusted as needed, depending on the floor quality and degree of soiling.

The cleaning trolley is available in two versions: Activa Method Control for large cleaning items and Activa Method Control Mini for smaller cleaning items.

See next page!

Activa Method Control

A unique new feature that saves time, reduces costs and helps the environment!

Activa Method Control - the only cleaning trolley with a computer-controlled system.

Advantages:

- Optimal control of mop impregnation.
- Time-saving, cost-effective.
- Quality of cleaning increases.
- Minimum consumption of water and chemicals.
- Optimum ergonomics.

Equip the cleaning trolley with the amount of mops you will use during the cleaning (use dry mops, not prepared with water or chemicals).

Mix the cleaning chemicals with water (to get ready-to-use chemicals) in the can and place it on the cleaning trolley.

On the control panel you can choose the exact amount of chemicals (between 20-100 ml/ mop). Then push the Spray-button.

The spray nozzles inside the box moisten the cleaning mop.

Just throw the used mop into the laundry bag...

...and pick up a new, clean mop.
