

ConcreteX**CONCRETEX PHOTOCATALYTIC SEALER****A PROACTIVE APPROACH TO CONCRETE SURFACE CARE****HARNESSING THE POWER OF THE SUN AND INTERIOR LIGHT****How Does It Work?**

ConcreteX is a unique formulation combined with our exclusive Nano-Particulate Self-Cleaning Technology. Our technology contains nano particles of TiO_2 along with 5 other active ingredients which forms a permanent bond to the surface that will hold contaminate particles (oil, mold, brake fluid etc..) onto the surface so that the photocatalytic process (powered by the sun and man-made light) can begin breaking down the contaminate particles

How Long Does It Take To Work?

If ConcreteX is applied directly over dirty stained surfaces, the process will take between 30-90 days to self-clean. However, if applied to a clean surface, the process will start working within the first few hours after applied.

How Long Will It Last?

Because a permanent bond is created, ConcreteX is always going to be there, but to keep working at optimal levels, we recommend a quick and light reapplication every 18-30 months.

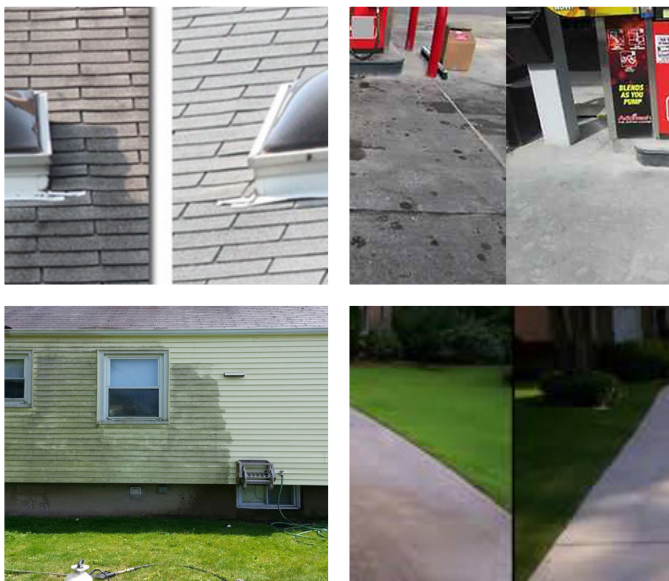

Cool Science

ConcreteX is a water based inorganic hybrid liquid cured reactive ceramic particles with proprietary additives that form an irreversible bond when applied to surfaces, thus becoming a permanent part of the treated surface. Once our coating has been applied, the self-cleaning nano-particulate technology utilizes the ultra violet rays of natural and artificial lighting to prevent the growth of mold, mildew and algae. We also help breakdown new deposits of smog, airborne hydrocarbons, grease, oil, transmission fluid, antifreeze and other grime and debris.

ConcreteX Photocatalytic Sealer

- Penetrating-Densifying-Hardener
- Eliminates Routine Cleaning
- Saves Time, Water and Money
- UV Inhibitors extend the life of all concrete surfaces
- Improves Appearance and Protects Your Investment
- Prevents Attachment of Road Grime, Oil, Brake, Antifreeze and Trans Fluid
- Resists Hot Tire Marks
- Non-Film Forming—Allows Surfaces to Breathe
- Winter Salt Residue Rinses Right Off and Doesn't Damage the Coating

What Surfaces Can This Be Applied Too?

All concrete surfaces can be protected. Gas station pads, sidewalks, pool decks, concrete walkways, polished concrete flooring, bricks, pavers and more. Since ConcreteX has UV inhibitors and is self-cleaning, we recommend applying to all concrete tile and asphalt roofs. A clean roof lasts longer, looks better and dissipates external and internal heat better. Therefore, we are constantly and always saving you money!
