

RoofX**ROOFX PHOTOCATALYTIC SEALER****A PROACTIVE APPROACH TO ROOF SURFACE CARE****HARNESSING THE POWER OF THE SUN AND INTERIOR LIGHT**

How Does It Work?

RoofX is a unique formulation combined with our exclusive Nano-Particulate Self-Cleaning Technology. Our technology contains nano particles of TiO_2 along with 5 other active ingredients which forms a permanent bond to the surface that will hold contaminate particles onto the surface so that the photocatalytic process (powered by the sun) can begin breaking down the contaminate particles and then be washed away by rain.

How Long Does It Take To Work?

If RoofX is applied directly over dirty stained surfaces, the process will take between 30-90 days to self-clean. However, if applied to a clean surface, the process will start working within the first few hours after applied.

How Long Will It Last?

Because a permanent bond is created, RoofX is always going to be present, but to keep working at optimal levels, we recommend a quick and light reapplication every 3-5 years.

Cool Science

RoofX is a water based coating with inorganic hybrid liquid cured reactive ceramic particles with proprietary additives that form an irreversible bond when applied to surfaces, thus becoming a permanent part of the treated surface. Once our coating has been applied, the self-cleaning nano-particulate technology utilizes the ultra violet rays of natural and artificial lighting to prevent the growth of mold, mildew and algae. We also help breakdown new deposits of smog, airborne hydrocarbons, food grease and other grime and debris.

RoofX Photocatalytic Sealer

- Penetrating-Densifying-Hardener
- Helps resist mold and algae
- Saves Time, Water and Money by eliminating routine cleaning
- UV Inhibitors extend the life and slows sun damage
- Improves Appearance and Protects Your Investment
- Extends the life of your roof
- Improves reflectivity, which helps to lower energy costs
- Non-Film Forming—Allows Surfaces to Breathe
- Densifying sealer increases tile strength

Other Surfaces This Technology Can Be Applied To

All roof and concrete surfaces can be protected. Gas station pads, sidewalks, pool decks, concrete walkways, polished concrete flooring, bricks, pavers and more. Since RoofX has UV inhibitors and is self-cleaning, we recommend applying to all concrete tile and asphalt roofs as well. A clean roof lasts longer, looks better and dissipates external and internal heat better. Therefore, we are constantly and always saving you money!
