

Think ahead.

Innovative trainings to reinforce hand hygiene and infection prevention in your healthcare facility

Infection prevention, as well as surface cleaning and disinfection, is critical in healthcare environments. Proper surface hygiene mitigates cross-contamination and reduces healthcare associated infections (HAIs).

Tork Interactive Clean Hospital Training is a free online tool designed to make the training process for cleaning healthcare facilities engaging and efficient. It's based on the Association for the Health Care Environment's Practice Guidance for Health Care Environmental Cleaning, helping ensure cleaning staff fulfill tasks to industry standards.

More than 7 out of 10 people say they will have higher expectations on the hygiene standards of hospitals after COVID-19³

More than half worry that the lack of proper hygiene habits at hospitals might expose them to antimicrobial resistant germs⁴

Proper surface hygiene minimizes the risk of HAIs and cross-contamination
