ULTIMATE DeLux

VMP TECHNOLOGY

LIGHTER AND MORE DURABLE MOPS

V - VELVET

- free untwisted yarn to optimize the microfiber capillary web (*absorption*)
- numerous launderings will not damage the structure or efficiency of the fibers
- no need for an intermediate textile layer (*foam, microfiber liner...*)

microfiber 80/20 in a knitted fabric

polyester microfiber in a **VMP** velvet fabric

velvet: 3-dimension structure

M - MICROFIBER

- yarn with a size under 1 decitex (*1 g / 10 km*)
- easily removes residual soil by friction (*mechanical strength*)
- absorbs in depth within the spaces created between the fibers (*capillary strength*)

cotton fibers

microfibers

P - POLYESTER

- better resistance to chemicals and temperature
- greater capacity to release cleaning fluid (*hydrophobic*)
- absorption and retention of oil based soil within the yarn (*lipophilic*)

EXTRA

POLYESTER MICROFIBER

- clean production process (*no caustic soda treatment*)
- best compromise removing | absorption | glidability
- + 60% microfiber compared to the 80/20 microfiber mops

THE NORDIC SWAN ECOLABEL

THE OFFICIAL ECOLABEL OF THE NORDIC COUNTRIES

In 2019, Decitex was awarded the Nordic Swan Ecolabel for 17 products in the range and their different versions.

This accreditation award represents one more step in our company's mission for success in responsible production and accountability, ever more respectful of the environment.

All products manufactured by Decitex are designed to be smart, more sustainable, efficient and above all innovative in their market sector applications.

The Ultimate 3D Infinite, our latest textile innovation, is a perfect example. It is a short life microfiber mop, eco-designed and made from 100% recycled materials. Made in Europe and particularly light (26 g), its microparticle loss rate is extremely low (category A - Low). In addition to saving water and chemicals, it has been tested based on EN16615 standard, which demonstrates a bacteriological average reduction of 99.999% on staphylococcus aureus (- 5.01 log).

A true concentrate of technology, ideal for bio-cleaning of floors with microfiber and water.

At Decitex, we are constantly seeking to innovate while improving the design and carbon footprint of each of our products. When one of the raw materials is coming from a recycling center, it is another step towards contributing to the circular economy and environmental protection.

The Nordic Swan Ecolabel certifies the quality of a product according to several criteria as well as an environmentally friendly production process. This is why the Swan is in agreement with the Decitex values and the following pages will explain how.

WHAT IS THE NORDIC SWAN ECOLABEL?

The Nordic Swan Ecolabel works to reduce the environmental impact from production and consumption of goods – and to make it easy for consumers and professional buyers to choose the environmentally best goods and services.

THE NORDIC SWAN ECOLABEL...

- Sets strict environmental requirements in all relevant phases of a product's life cycle
- Sets strict requirements for chemicals used in ecolabelled products
- Tightens requirements for goods and services continuously to create sustainable development
- Certifies and verifies that all requirements are met before a product is approved

60 PRODUCT GROUPS

It is possible to obtain a certification with the Nordic Swan Ecolabel within 60 different product groups counting more than 200 different product types.

MORE THAN 25,000 DIFFERENT PRODUCTS

are sold with the Nordic Swan ecolabel in the Nordic countries and the number is growing.

ESTABLISHED IN 1989

The Nordic Swan Ecolabel was established in 1989 by the Nordic Council of Ministers as a voluntary ecolabelling scheme for the nordic countries Denmark, Finland, Iceland, Norway and Sweden. It is an effective tool to help companies that want to go ahead with sustainable solutions – and thereby enable consumers and professional buyers to choose the environmentally best goods and services.

GLOBAL ECOLABELLING NETWORK

The Nordic Swan Ecolabel is one of the founders back in 1994 of the international network for ISO 14024 Type 1 ecolabels, GEN, the Global Ecolabelling Network.

The Nordic Swan Ecolabel ensures compliance with several environmental criteria throughout the production chain and performance criteria of the microfiber product.

ENVIRONMENTAL CRITERIA DURING PRODUCTION

The ecolabel imposes limit values in terms of the emission of certain components, the presence of certain chemicals in the product and in any rejected water.

The criteria are on:

- Polymer production (PET and PA)

During the production of these polymers, emissions of substances into the air are produced. The label ensures that these emissions do not exceed a critical threshold. For example, for the production of PET, VOCs are emitted and must not exceed the threshold of 1.2 g / kg.

- Use of chemicals

The list of all the chemicals used must be listed and the substances are checked for toxicity (e.g. formaldehyde, biocides, CMR substances, etc.).

Dyes for dyeing are also controlled.

- How wastewater is treated during treatments using water (e.g. dyeing)

PERFORMANCE CRITERIA

The ecolabel imposes limit values for the properties and performance of the product, in particular on:

- Dimensional stability of the product at washings
- Discoloration of the product during washing
- Capacity for cleaning / removing dust and dirt
- Ability to eliminate microorganisms
- Absorption capacity

RECYCLING INSTRUCTIONS

- Component Labeling
- Recycling logo (papers, plastics)

CONTINUOUS QUALITY CONTROL

The Nordic Swan Ecolabel involves the implementation and application of procedures in case of problems encountered in order to ensure the quality of the product:

- Product change procedure (planned or unplanned)
- Traceability management
- Return system for defective products

THE NORDIC SWAN ECOLABEL AND THE UNITED NATIONS SUSTAINABLE DEVELOPMENT GOALS

The Nordic Swan Ecolabel is the official ecolabel in the Nordic region. Its goal is to reduce the environmental impact of consumption and production. When setting requirements, it therefore assesses the entire life cycle of the products, from raw materials to production, use, disposal and recycling.

The United Nations sustainable development goals are a universal call to action to fight poverty and inequalities, protect the planet and tackle climate change by 2030. To achieve the goals, all of us must make an effort: governments, the private sector, the public sector, civil society and every individual.

The requirements of the Nordic Swan Ecolabel promote sustainable use of resources, recycling and reuse and reduce waste in all parts of the life cycle of ecolabelled products and services.

The Nordic Swan Ecolabel is a powerful tool for securing a sustainable future – and actively contributes to accomplishing 11 of the 17 United Nations sustainable development goals.

On an overall level the Nordic Swan Ecolabel contributes to goal 12, “Ensure sustainable consumption and production patterns”. Therefore, this ecolabel strives to reduce the environmental impact of production and consumption. This ensures sustainable production as well as control of the value chain – and provides the end user with sustainable products. The Nordic Swan Ecolabel places most importance on environmental aspects, but also puts emphasis on health and social conditions where relevant.

Nordic Swan ecolabelled products are manufactured all over the world. Wherever products are made, their strict environmental requirements go beyond legislation. In that way they propagate more environmentally friendly production methods – also in developing countries.

SUSTAINABLE DEVELOPMENT GOALS
